Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
   int rev = 0, remainder;
   while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;

    }
print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include <stdio.h>
int main()
{
    int n;
    int rev = 0, remainder;
    int c = 2;
    scanf("%d", &n);
    while (n != 0)
    {
        c++;    // while(n!=0)
        remainder = n % 10;
        c++;    // remainder=n%10
        rev = rev * 10 + remainder;
        c++;    // rev=rev*10+remainder
        n /= 10;
        c++;    // n/=10
    }
    c++;        // fail condition
    printf("%d", c);
    return 0;
}
```

	Input	Expected	Got
